Fresh Fruit From Your Own Garden

PROGRESSIVE EVERBEARING STRAWBERRY

SELECTED BLACKBERRIES

Eldorado. The vines are vigorous and hardy, enduring the winters of the far northwest without injury, and their yield is enormous. Berries large, jet black; borne in large clusters, and ripen well together; they are very sweet, melting and pleasing to the taste, have no hard core, and keep eight or ten days after picking with quality unimpaired.

Strong roots, each 20c; 10 for \$1.50; 100 for \$10.00.

SELECTED CURRENTS

Perfection. New. A very productive red variety, with berries about as large as grapes. Price: Strong roots, each 50c; 10 for \$4.00; 100 for \$30.00.

Fay. Berries are large, uniform in size, with long stems, good flavor, very productive and easy to pick. Each 50c; per 10 \$4.00; per 100 \$30.00.

RASPBERRY

Cuthbert. A remarkably strong, hardy variety; berries large, rich crimson, sweet. Each 15c; 10 for \$1.00; per 100 \$7.00.

Plum Farmer. Black. Matures its crop in a very short period, making it one of the most profitable early market sorts. Each 15c; 10 for \$1.00; per 100 \$7.00.

"Progressive" Everbearing Strawberries

Fruit First Season and from July to November

Bear all Summer. Under ordinary conditions they produce their main crop of fruit at the same time as other varieties and keep on bearing until frost. A good plan, however, is to cut off all buds as they appear until late in July, and thus conserve the strength of the plants for the fall crop. Treated in this way an abundant crop of berries may be looked for during September and October, or if the disbudding of part of the plants is discontinued late in June an almost continuous crop of this luscious fruit may be secured throughout the growing season. Good cultivation is essential to bring about the best results, a liberal mulching during the summer is beneficial and the plants should not be allowed to suffer for lack of water at any time.

Progressive. The most prolific fruiting, berries of good size and produced in great abundance; they are of an attractive deep, glossy crimson color and of good flavor.

PRICES: Per 25 Plants \$1.00; per 50 Plants \$1.75; per 100 Plants \$3.00; per 250 Plants \$7.00; per 500 Plants \$13.00; per 1000 Plants \$25.00.

NOTE:—All prices quoted above include Free delivery to your door.

SELECTED VARIETIES FOR SPRING PLANTING.

CITY AND SUBURBAN HOME GROUNDS

may be greatly improved at small expense by planting a few Grape-vines around the house and yard. The foliage adds beauty and grace to the surroundings, while fresh Grapes and other fruits will supply the table.

SELECTED GOOSEBERRIES

SELECTED GRAPES

Price any of following, strong 2 year plants: Each 50c; 10 for \$1.00; 20 for \$7.00.

Agawam. Berries very large, with thick skin; pulp soft, sweet and sprightly; very vigorous; ripens early.

NEW EVERBEARING RASPBERRY, ST. REGIS

This is not only the earliest Raspberry, but it is a perpetual fruiting variety. Its main crop is greater than that of any other red variety, and continues to bear fruit on the old canes until late in August, at about which time the berries begin to ripen on the young canes of the current year's growth, which continue to bear fruits in increasing number until late in fall. The berries are bright crimson, of good size, excellent quality, of a rich sugary, full raspberry flavor. Price, each 20c; 10 for \$1.50; 100 for \$10.00.

"Worth-While" Quality Vegetable Seeds FOR HOME GARDENS

The Easy Way to Success
in Your
Vegetable Garden

If you are not thoroughly posted it is a difficult matter to make up your seed order out of a multitude of varieties as listed in the ordinary seed catalogue. If you happen to select the best sorts, all well and good, but if you are not posted you are just as apt to order a half or more varieties that are well known to seed trade as seconds or thirds in value and that will give you inferior results when grown in your garden. By our plan we have done away with the many poorer sorts and list only those that have been proved the very best of their kind.

We have been growing fancy vegetables for our home tables for a good many years. During that time we have selected the very cream out of a multitude of varieties such as are usually carried by the ordinary seedsman and you can make no mistake in ordering freely from these pages, as every variety listed is one we have found to be the very best of its kind.

SWISS CHARD OR SPINACH BEET,
Excellent for "Boiling Greens"

SWISS CHARD or SPINACH BEET**One Ounce Will Sow 100 Feet of Row**

The remarkable demand for this exceptionally meritorious vegetable proves that it is finally receiving that degree of attention which its many valuable characteristics deserve. Swiss Chard is a type of Beet growing all tops. The tops consist of strong ribs or leaf-stalks which support the very large leafy portion of the plant. Cooked like Spinach Greens, the leafy portion of Swiss Chard is of most excellent flavor. The stalks are cooked in a similar fashion and served with a dressing as you would prepare asparagus. Thus Swiss Chard really gives you two vegetables in one. Plant the seeds the same as ordinary Beet seeds, but thin out plants to stand, first 6 inches, later on a foot apart.

A BED OF KING HUMBERT CANNAS,
BORDERED WITH GERANIUMS.

CULTURE FOR CANNAS

Dormant roots can be started in home, conservatory or hot-bed, in sand or sphagnum moss, from February 15th up to May 1st. After making root growth they should be potted into light soil and planted out about June 1st. Dormant roots can also be planted into open ground about May 10th. However, such of course, bloom rather late in the season. For those who have not the facilities for growing on dormant roots, we supply strong started plants about May 25th and up to July 1st. (See opposite.)

OUTDOOR PLANTING OF CANNAS

Cannas should be planted in good, rich garden soil, mixed with half of old rotten stable manure, by the end of May when danger from frost is past. Water sparingly for first two weeks after planting. When growing freely, water liberally. Set the plants about 18 inches apart each way, and if more than one kind is used, be careful to plant the taller growing kinds in the center and the dwarf ones along the edge. This applies to planting in beds.

POT-GROWN TOMATO AND PEPPER PLANTS PRODUCE WEEKS AHEAD OF OTHERS.

GIANT NON-LATERAL

New Introduction of Exceptional Merit

Several years ago an American Specialist in Aster Culture undertook a certain series of crosses to obtain a tall growing non-lateral strain of Asters, and this season we are offering for your consideration the perfected results of his work. By crossing the tall growing non-lateral American Beauty with some of the finer types of the Crego class, an Aster with the type of Crego and Peony flowers and with a non-lateral branching stem was secured. These Asters attain a height of some three feet and the long stems are surmounted by flowers of ultra refined Crego and Peony Flowered types. The size of the flowers is phenomenal. The fact that these Asters are without laterals causes an unbroken sap flow from the base to the one flower at the terminal, thereby accounting for their immense size. The flowers can be cut with individual stems ranging from eighteen inches to two feet in length. The blossoms of the Crego Type are large, fluffy and not unlike the general make-up of a refined type of Japanese Chrysanthemum.

"Hedges for Living Fences"

PRIVET (LIGUSTRUM) AMOOR RIVER VARIETY.
Genuine Northern Illinois Grown.

NATURALISTIC HEDGES

Besides the Privet and Barberries the following make good hedges. They need not be trimmed after the first year or two, but if left to grow naturally, will be very satisfactory. Descriptions and prices of the following list will be found alphabetically arranged in the Shrub Pages (22 to 23 inclusive) of this Catalogue.

SPIRAEA VAN HOUTTEI
PHILADELPHUS (MOCK ORANGE)
LILACS, ALL VARIETIES
WEIGELIA ROSEA
ROSA RUGOSA (JAPANESE ROSE)

For real beauty Spiraea Van Houttei outshines them all, either in bloom or foliage, along the side of a lawn or against the foundation of a house (see page 23 for illustration).

BARBERRY—BERBERIS

THUNBERGH'S OR JAPANESE

There is no shrub in existence so generally planted or more practical for all purposes where beautiful foliage effect is desired than this. The Japanese Barberry is of spreading growth and reaches only medium height. Its foliage is a beautiful light green (turning to bronze red in the fall), and it has a small yellow flower. The fine thorns serve as a protection. Following the close set, small white flowers, are oblong berries of a bright red color which hang on during the winter. This is one of its most valuable characteristics, as very few hedges have any great beauty during the winter months. In addition to its other good points, Japanese Barberry is as hardy as an oak.

Barberry does not grow quite so thickly as the Privets, but then they are not intended for a tall hedge; will thrive north or south, on any kind of soil.

A SPECIALTY WITH US

Hedges have appropriately been called "living fences." They serve as a protection from outside intrusion, and at the same time are beautiful. Hedges can be used for marking the boundary lines of your property where division is desired. How much prettier is this wall of solid rich green than an ugly, artificial looking fence! All of our hedge plants are genuine "Northern Illinois" grown, highly cultivated and with a plentiful supply of fibrous root growth, thus insuring early results.

THE POPULAR PRIVET HEDGE

(See Illustration Opposite)

One of the most popular and perhaps the best all-around hedge plant is the so-called Amoor River Privet ("California Privet.") Is not hardy in the North—it is a waste of time and money to plant it). This is a very rapid growing plant which forms a solid, even, green wall, and is easily trimmed. This splendid hedge should be more largely planted, as it is a rapid, hardy grower and satisfactory in every respect.

We wish to caution prospective buyers against purchasing Southern Grown Amoor Privet. Also California Privet, frequently offered by unscrupulous dealers at so-called bargain prices. To plant such stock in northern Illinois is positively a waste of time and money.

Extra strong two-year-old plants, \$1.25 each.

HARDY EVERBLOOMING ROSES

For the benefit of those of our customers who may not have had very good success with this popular plant, we give a few instructions for planting and general care.

If the roots seem to be very dry when received, soak thoroughly in water. At no time after unpacking should the roots be exposed to the sun or dry winds.

In preparing a Rose Bed, select a sunny location guarded from cold north winds. Dig the ground where you are going to plant to a depth of two or three feet and about three feet in width; then refill the trench with a mixture of soil (any good fertile soil will do), well rotted cow manure or bone meal making provision for good drainage if location is not naturally drained. Then plant your Roses, being very particular to press and tamp the soil firmly around the roots; and soaking thoroughly at the finish. An occasional soaking with weak manure water is a great help to Roses of all sorts, and especially during the blooming season.

American Beauty. The queen of all roses, producing extremely fragrant and extra large flowers. Color fine deep pink, shaded toward the center a carmine crimson. Price: Each \$1.00; dozen \$10.00.

In color a luminous flame-pink, toned with coral and shaded with translucent gold at the base of the petals. In fragrance it is equal in its intensity to the finest Marechal Niel. The buds are long and pointed and expand into a flower of mammoth proportions. The growth is vigorous to a degree. The beauty of form and ever-increasing wealth of color are maintained from the incipient bud until the last petals drop. \$1.50 each.

A wonderfully improved form of our greatly admired native Marshmallow or Rosemallow, in which not only the colors have been greatly intensified, but in which flowers of enormous size, frequently 10 to 12 inches in diameter, have been developed. These plants can be highly recommended for all kinds of plantings. They appear to be equally at home in all positions, having the same vigor in dry and wet ground and are perfectly hardy. They grow from 5 to 8 feet high, and are very floriferous, blooming from early in July until late in September. We offer three distinct colors—Red, Pink and White—in strong three-year-old roots. 75c each; \$8.00 per doz.

The Large Roots which we supply, will BLOOM FREELY This Year.
